Executive Summary

AI Greentick's inner pages — About, Industries, Careers, Contact, and Blog — are genuinely well-optimized, with strong factual content, complete meta tags, and good E-E-A-T signals. But the three highest-traffic pages (Homepage, Pricing, and Integrations) are shipping a leftover build-tool title ("Shadcn Studio Export") instead of branded metadata, which undercuts search and social visibility exactly where it matters most. The most urgent fix is that title/meta bug, alongside replacing competitor-hosted client logos and generic template testimonials that currently sit on the Homepage and About page. The clearest opportunity is adding FAQPage and Organization schema — the underlying content already exists, so this is largely markup work rather than new content.

Dimension	Score	Status	Key Takeaway
SEO	5/10	On Track	Strong on inner pages, critically broken metadata on Home/Pricing/Integrations.
GEO	6/10	On Track	Rich factual content, but trust undercut by competitor-hosted logos & generic testimonials.
AEO	5/10	On Track	Good question-phrased FAQs, but no schema markup and some answers may not render server-side.
Combined	16/30		

Pages Audited

URL	Page Type	Notes
/ (Homepage)	Homepage	Title tag broken: shows "Shadcn Studio Export"; generic meta description; competitor-hosted logos
/about	About / Company	Fully optimized; strong factual density (founded 2022, 2,000+ businesses, ₹180Cr+ processed)
/pricing	Pricing	Title tag broken: shows "Shadcn Studio Export"; strong comparison table content
/industries	Solutions / Industries	Fully optimized; rich schema-ready vertical content, OG image set
/integrations	Integrations	Title tag broken: shows "Shadcn Studio Export"; generic meta description
/team-inbox	Product Page	Fully optimized; canonical, OG, Twitter card all present
/careers	Careers	Fully optimized; strong long-form content with clear role data
/contact	Contact	Fully optimized; NAP data present (Jaipur, Rajasthan); good local signals
/blog	Blog Index	Fully optimized; category taxonomy and author bylines present
/blog/whatsapp-broadcast-best-practices	Blog Post	Excellent: author, published_time, OG image with alt+dimensions, keywords

SEO Analysis

Score: 5/10 — On Track

Technical On-Page

Signal	Finding	Status
Title tags	Home, Pricing, and Integrations pages render the literal title "Shadcn Studio Export" — a leftover build/export label instead of a branded, keyword-rich title. About, Industries, Careers, Contact, Blog, and Team Inbox all have strong, unique titles (50-70 chars, brand + keyword).	Missing
Meta descriptions	Same 3 pages (Home, Pricing, Integrations) show the generic "Generated by Shadcn Studio" description instead of a compelling, keyword-rich summary. Every other crawled page has a tailored 140-160 char description.	Missing
Canonical tags	Present and self-referencing on About, Industries, Pricing content pages, Careers, Contact, Team Inbox, Blog, and blog posts. Not detected in the Home/Pricing/Integrations frontmatter, consistent with the same export bug.	Needs Attention
Open Graph / Twitter Card	Present with title, description, and (on Industries and blog posts) image + alt + dimensions. Absent on Home, Pricing, and Integrations — meaning links to the homepage itself will preview poorly on social/WhatsApp shares.	Missing
Heading hierarchy	Pages use clear section markers ("THE PROBLEM", "THE SOLUTION", "HOW IT WORKS") and H2/H3-style subheads with keyword relevance (e.g. "WhatsApp Automation for Every Industry"). Single clear top-level heading per page.	Good
Image alt text	Product screenshots and illustration images carry descriptive alt text (e.g. "Unified Inbox Dashboard", "About us illustration"). Client logo images (SaffronStays, Rustonjee, etc.) also have alt text, though the images themselves are hotlinked from a competitor's CDN (see GEO section).	Needs Attention

Signal	Finding	Status
Internal linking	Strong internal link structure — nav, footer, and CTAs consistently point to /pricing, /industries, /integrations, /blog, /contact, /careers with descriptive anchor text.	Good
Mobile viewport	viewport meta tag (width=device-width, initial-scale=1) present on every page crawled.	Good
Robots.txt / Sitemap.xml	Could not be fetched directly in this audit (tool access restriction on this session). Recommend manually checking https://ai-green-tick-theta.vercel.app/robots.txt and /sitemap.xml to confirm they exist, are not blocking key pages, and the sitemap references all live URLs.	Needs Attention

Content Quality

Signal	Finding	Status
Word count / depth	About, Industries, and Careers pages carry substantial, specific copy (500+ words) with concrete numbers rather than filler. Home/Pricing/Integrations are feature-dense but more marketing-shorthand than long-form.	Good
Content freshness	Blog posts carry visible publish dates (July 9, 2026) and read-time estimates. Note: all 5 non-engineering posts share the identical July 9, 2026 timestamp, which reads as a batch-import rather than organic publishing cadence.	Needs Attention
Readability	Content is scannable — numbered lists, bold stat call-outs, and short paragraphs throughout, especially on the blog post reviewed (10-point structured list).	Good
Keyword coverage	Industries page explicitly targets vertical keywords ("ecommerce whatsapp", "healthcare chatbot", "real estate automation") via meta-keywords tag. Home/Pricing lack any keyword targeting due to the export bug.	Needs Attention

Structured Data

Signal	Finding	Status
JSON-LD / Schema markup	No structured data (Organization, Product, FAQPage, BreadcrumbList) was detected in the fetched markup on any crawled page. Given the FAQ content on Home and Pricing, and Organization details on About, this is a clear gap.	Missing
Schema validity	N/A — no schema present to validate.	Missing

GEO Analysis

Score: 6/10 — On Track

E-E-A-T Assessment

Signal	Finding	Status
About page depth	Excellent — explains origin story, mission, founding year (2022), and specific growth numbers. This is exactly the kind of first-person, verifiable narrative AI engines reward.	Good
Trust signals / certifications	Meta BSP status, ISO 27001, DPDP Act compliance, and AWS hosting are called out explicitly with a dedicated "Security & Compliance" section — strong, specific trust signals.	Good
Client logos	Client logo images on the Homepage and About page are hotlinked directly from doubletick.io — a direct competitor's CDN (e.g. https://doubletick.io/images/logos/logo-1.webp). This means the "trusted brands" section is displaying a competitor's actual client roster images, which is a serious credibility and potential trademark/rights issue.	Missing
Testimonials	Testimonial quotes ("Jamie Lee, Operations Manager") and company names (Bright Sync, Novas Solution, Looma Labs, Crestline, Cognitech Labs, Tech Wave) read as generic template placeholder content rather than named, verifiable customers — no company links, no photos, no specific outcomes tied to AI Greentick by name in most quotes.	Missing
Author information	Blog posts carry named authors with role titles (Priya Patel, Growth Marketing Manager; Aditya Sharma) and avatar images — good for E-E-A-T, though no author bio pages or credentials link were found.	Needs Attention
Contact transparency	Contact page provides real, specific NAP data: hello@aireentick.com , support@aireentick.com , Jaipur/Rajasthan address with embedded map, and stated office hours (Mon-Fri 10am-7pm IST).	Good

Content for AI Synthesis

Signal	Finding	Status
Factual density	About page is rich in specific, citable facts: 2,000+ businesses powered, 600M+ messages delivered, ₹180Cr+ commerce processed, 6 industries served — exactly the kind of concrete data an AI Overview or Perplexity answer would want to cite.	Good
Clear value proposition	Homepage and Pricing state the core offer plainly up top ("Turn every WhatsApp conversation into revenue"; "One flat platform fee plus official Meta conversation charges with zero markups").	Good
Comprehensiveness	Industries page thoroughly covers 6 verticals with specific outcome metrics per vertical (35% Cart Recovery, 80% Fewer Missed Bookings, etc.) — strong topical completeness.	Good
Originality / competitive framing	Pricing page includes a direct, specific comparison table against AiSensy, WATI, and Interakt with named differentiators (markup %, per-agent fees) — this kind of comparative, falsifiable claim is attractive for AI-engine citation, provided the claims are accurate and can be defended if challenged.	Good

Technical GEO

Signal	Finding	Status
HTTPS	Site is served over HTTPS on the vercel.app domain.	Good
Structured data depth	No Organization, Product, or Review schema detected anywhere — a missed opportunity given how much verifiable factual content exists on the About and Industries pages.	Missing
Social/brand entity links	Footer links to Twitter/X, Instagram, YouTube, GitHub, LinkedIn, Telegram, and Medium are present, which helps establish the brand entity graph — worth confirming	Needs Attention

Signal	Finding	Status
	these actually resolve to AI Greentick's own profiles rather than generic placeholders.	

AEO Analysis

Score: 5/10 — On Track

Featured Snippet Eligibility

Signal	Finding	Status
Direct answer paragraphs	The one FAQ answer that rendered in full ("What is the WhatsApp Business API and do I need it?") is a clean, snippet-ready 40-60 word direct answer. Other FAQ items on Home and Pricing did not return answer text in this crawl — likely collapsed/client-rendered accordions, which needs manual confirmation that the answer text exists in the page's HTML (not just revealed on click via JS).	Needs Attention
Definition patterns	The rendered FAQ answer uses a clear "X is..." definition pattern, which is ideal for featured snippets.	Good
List content	Blog post reviewed uses a clean numbered list (10 best practices) — strong list-snippet candidate.	Good
Table content	Pricing page's competitor comparison table and Meta conversation-fee category table are both well-structured for table snippets.	Good

Structured Answer Formats

Signal	Finding	Status
FAQ schema	No FAQPage JSON-LD schema was detected despite FAQ accordions existing on both the Homepage and Pricing page — a clear, low-effort win since the Q&A content already exists.	Missing
HowTo schema	The "How It Works" 4-step onboarding section (Connect number → Import contacts → Automate → Scale) is a natural HowTo candidate but has no HowTo schema markup.	Missing
Question-phrased headings	FAQ section headings use natural question phrasing ("What is the WhatsApp Business	Good

Signal	Finding	Status
	API and do I need it?", "Can I get the Green Tick verification?").	

Voice Search Readiness

Signal	Finding	Status
Conversational language	Copy throughout uses natural, direct language rather than stiff corporate phrasing ("WhatsApp is leaking your revenue").	Good
Long-tail question coverage	FAQ topics cover common long-tail queries (Green Tick verification, data migration, setup time, number porting) — good breadth, though several answers weren't confirmed as rendering in raw HTML (see AEO structured findings above).	Needs Attention
Local signals	NAP data is present and specific on the Contact page (Jaipur, Rajasthan, India; embedded Google Map; stated hours), which supports local/voice queries like "WhatsApp API company near me."	Good

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Fix the "Shadcn Studio Export" title/meta-description bug on Home, Pricing, and Integrations pages — replace with branded, keyword-rich titles and unique descriptions.	SEO	Low	High
Critical	Replace competitor-hosted (doubletick.io) client logos and generic template testimonials with real, named AI Greentick customers and self-hosted logo assets.	GEO	Medium	High
High	Add canonical, Open Graph, and Twitter Card tags to Home/Pricing/Integrations to match the quality already present on other pages.	SEO	Low	High
High	Implement FAQPage JSON-LD schema for the existing FAQ content on Home and Pricing — the Q&A content already exists, this is markup-only work.	AEO	Low	High
High	Confirm all FAQ accordion answers render in raw server HTML (not just on client-side click) so search/AI crawlers can read them.	AEO	Medium	High
Medium	Add Organization schema (name, logo, URL, sameAs social profiles) sitewide to strengthen entity recognition for AI engines.	GEO	Low	Medium
Medium	Add HowTo schema to the 4-step onboarding flow on the homepage.	AEO	Low	Medium
Medium	Vary blog post publish dates / add a visible "last updated" cadence rather than 5 posts sharing one timestamp.	SEO	Low	Low
Quick Win	Confirm robots.txt and sitemap.xml exist, are current, and reference every live page (including blog posts and industry sub-pages).	SEO	Low	Medium
Quick Win	Verify footer social links (Twitter, Instagram, YouTube, GitHub, LinkedIn, Medium, Telegram) actually resolve to AI Greentick's own profiles.	GEO	Low	Low

What's Working Well

- ✓ About page delivers genuinely strong E-E-A-T signals: specific founding year, growth numbers, and named certifications (Meta BSP, ISO 27001, DPDP Act).
- ✓ Industries and Blog sections are fully optimized — unique titles, meta descriptions, OG images with alt text and dimensions, and keyword targeting.
- ✓ Blog posts carry named authors, role titles, publish timestamps, and clean list-based structure that's well-suited to both traditional SEO and AI snippet extraction.
- ✓ Pricing page's direct competitor comparison table (vs AiSensy, WATI, Interakt) is exactly the kind of specific, falsifiable content AI engines look to cite.
- ✓ Contact page provides complete, specific NAP data with an embedded map — strong for local and voice search.

Glossary

SEO (Search Engine Optimization)	The practice of improving a website so that traditional search engines like Google rank it higher for relevant queries — through page titles, meta descriptions, headings, content quality, and technical crawlability.
GEO (Generative Engine Optimization)	Optimizing content so that AI-powered answer engines (ChatGPT Search, Perplexity, Google AI Overviews, Gemini) are more likely to find, trust, and cite the site when synthesizing an answer. Rewards clear entity identity, factual density, and trust signals.
AEO (Answer Engine Optimization)	Structuring content so search engines and voice assistants can extract a direct, standalone answer — through featured-snippet-friendly paragraphs, FAQ/HowTo schema, and question-phrased headings.
